

WALKABLE PV FLOOR NEW CONSTRUCTION

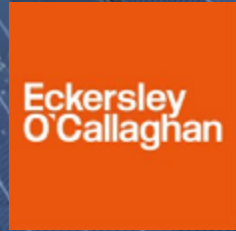

Onyx Solar provided **crystalline silicon photovoltaic glass** for a high-end residential resort in Sonoma County, located in Timber Cove, a picturesque cliff side area overlooking the Pacific Ocean. This project involves **three roofs for three buildings**: the main hall, guest rooms, and the garage.

The installation includes **trapezoidal crystalline silicon pieces** in **three shapes**, an **anti-slip finish** and a **ceramic black frit** on the back. Collaborating with Eckerseley O'Callaghan, this project marks a significant step in constructing such complexes, proving that luxury service standards can coexist with sustainability and self-consumption.
